

H04: Packaging of Bulk Rolls of Rubber Insulation

Effective Date: 06/20/2022

Each roll of rubber insulation will be individually boxed to allow handling and storage of single rolls. Rolls will be boxed to preclude damage to the center cardboard tube. Good commercial practices will be used to ensure the safe and undamaged receipt of the materials to Aerojet Rocketdyne.

Each roll will be limited to a maximum of 200 pounds (including packaging). Unless the line item quantity is less than 50 pounds, the minimum weight of each roll shall be no less than 50 pounds net weight of rubber, not to include packaging materials.

Label each roll on the inside of the center cardboard tube with the following information: part number/specification number, lot number, material description, PO number, date of manufacture, and expiration date.
